Work Experience

Software tester in Lionbridge Poland

September 2022 - present

Responsibilities:

• Conducting manual tests for new software functionalities, including confirmation, regression, exploratory, acceptance tests and dynamic testing.

• Working with tools such as Jira and Confluence.

• Creating test scenarios and test cases.

• Reproducing errors reported by users.

• Preparing reports on conducted tests and reporting identified defects.

• Working in the SCRUM methodology using a Kanban board.

Skills and used tools:

• ISTQB - knowledge of ISTQB issues.

• Jira - bug reporting, task management, Kanban board handling, basic knowledge of Jira Query Language.

• HTML - creating web pages using semantic tags, integrating HTML with CSS and JavaScript, creating navigation menus, creating HTML forms, creating hyperlinks.

• CSS - selecting HTML elements using CSS, understanding cascading styles, using FlexBox and PixelPerfect.

• JavaScript - integrating JavaScript with HTML, real-time HTML content modification, event handling on web pages, creating and manipulating objects.

• Basic knowledge of the following tools: MySQL, Postman, jQuery, Relational Databases.

I'm learning:

• React - creating components and managing component state, using routing, responding to user-triggered events.

• Cypress - basic knowledge of automated testing.
